

1 **ABSTRACT OF THE DISCLOSURE:**

2 The Graphic Object Interface (GOI) integrates supporting documents with the
3 drawings & specifications that they represent. This integration of often bulky and
4 cumbersome information into a single system computer run program allows all
5 individuals associated with the maintenance upkeep & troubleshooting of the equipment,
6 building or other item to be managed to have a comprehensive source of information
7 available to them as well as reducing the overall need for paper products and storage
8 space.

9 It is a self-booting system that runs on a MAC or PC with Software contained on
10 the disk so it will be independent from any computer operating system & software
11 previously installed on the host computer, therefore insuring compatibility with any
12 future operating systems & software, but also may be started from licensed software
13 installed on the users computer.
